Digital Literacy Project Report

Title Page

Name: Aniket Dev

Registration Number: 25BCE10843

Branch: CSE CORE

Year: 1st Year B.TECH

Course Code: CSE0001

Course Title: Digital Literacy

INTRODUCTION

It is very important for having the right knowledge to use technology in today's digital world. This project focuses on building a Digital Literacy Portfolio that helps the students to get online knowledge. This project involves five important areas that is digital awareness, professional online presence, coding platforms and collaboration platforms, email etiquettes and cyber crime awareness. This project improves technical understanding as well as enhances communication in the online platform. Overall it provides a strong foundation for students to navigate the digital world confidently.

TASK-1

For this task, I used the Canva app for creating a digital literacy infographic. The infographic focuses on three main topics: understanding digital literacy, safe internet practices, and a professional online presence. I have included the key points like using strong passwords, avoiding links which are suspicious. This task help me to think creative and outside the box. One interesting part of making this infographic was learning how to present important information in a concise and visually appealing way. The most challenging aspect was picking the right content and arranging it without overcrowding the design. This task helped me to see the importance of visual communication and how effective design can make information easier to grasp. Hence, Overall, it improved my creativity and understanding of digital literacy concepts.

TASK-2

In this task, I created profiles on GitHub, LinkedIn, and Kaggle. GitHub stores and shares code projects, LinkedIn is a platform for professional networking, and Kaggle is for hosting competitons. On GitHub, I have made a profile README that includes my name, branch, and learning goals. On LinkedIn, I have added my education details and basic profile information. These platforms are very helpful for career growth. GitHub showcases technical skills, LinkedIn provides networking and job opportunities, and Kaggle improves data science and machine learning skills. Over the next four years, I plan to regularly update my GitHub with projects, connect with professionals on LinkedIn, and improve my data science and machine learning skills in Kaggle. This will help me to build a solid digital presence and increase my chances of getting internships and job placements.

TASK-3

For the coding practice, I used HackerRank and completed the beginner-level problem "Solve Me First." This helped me to learn how coding websites work and how to solve problems step by step. I also earned a basic score that motivated me to keep practicing. For the collaboration part, I have created a Google Form titled "Digital Literacy Awareness Quiz" with five questions in it, including four multiple choice question and one show answer question. I also viewed the responses in Google Sheets which I did not attached in GITHUB. This task told me how easy it is to collect and look at the data using online tools. These platforms are very useful for schools or colleges. Coding platforms improve logical thinking and programming skills. Tools like Google Forms help conduct surveys and organize information in a clear way. This task increased my understanding of both technical and collaborative digital tools.

TASK-4

Poor digital communication skills can lead to misunderstandings and can create problems. For example, if a student sends emails to a professor without a clear subject line, greeting, or polite tone, the email might be ignored or considered disrespectful. In professional system, communication needs to be very much clear, respectful, and well-organized. This task showed me how important it is to write professional emails with the right format, including subject lines, greetings, and sign-offs. It also helped me understands responsible social media habits through the Do's and Don'ts checklist. Using good communication skills builds better relationships and prevents confusion in both academic and professional environments.

TASK-5

I was shocked to discover how frequent phishing and online fraud attacks are, particularly among students, while I was doing research on cybercrime. By clicking on links or messages, many people unintentionally tells private information. Financial loss are possible results of these attacks.

I will be more cautious and will not click on any unknown link . Before doing anything, I will always check the source from where the link has been sent. I learned how to stay safe online and became more aware of online threats. Additionally, it tells the need of how crucial it is to report cybercrimes via official channels like the National Cyber Crime Portal.

CONCLUSION

This project taught me many important things as I told in the other tasks. It increased my knowledge and make me aware of many crucial and important things about cybersafety. This project overall increased my knowledge about digital literacy and help me to get more digitally advanced. It also helps me to learn well about Github and told me the importance of websites or platforms like Linkedin which can be used for future opportunities in my field like for getting internship. It also told me not to click any unknown links as it can be fishy and result in our own loss. This project overall helped in my development and growth digitally.
